## User journey

by the Design Team of Accenture Interactive NL

Difficulty
Beginner

Creating a user journey is a quick way to help you and your team gain a deeper understanding of who you're designing for, aka the stakeholder in your project. The information you add here should be representative of the observations and research you've done about your users.

High-level steps your user needs to accomplish from start to finish	Users must be aware of the traffic signs.			The NFC tag would be required in all vehicles.			To determine the driver's status, use the Heart Beat Sensor.			It is critical to properly manage vehicles in order to reduce accidents.		
2 Steps  Detailed actions your user has to perform	Drivers must have a valid driver's licence.	Understanding of traffic laws and regulations.	Develop a positive driving attitude.	Using radio waves to identify and track.	Install a speed governor.	To communicate with active NFC devices, use NFC tags.	To determine the object's distance, use an ultrasonic sensor.	Traffic congestion is displayed on an LCD display.	GPS sensors placed in the vehicles.	Drivers must keep their vehicles in good working order.	To keep oil and coolant levels stable.	The remaining warning light informs drivers that their vehicle requires service
3 Feelings	NFC technology provides	To prevent accidents and	This technology		Better traffic	To provide techniques	Damage is	This method delivers	Avoiding accidents	Improve the	Early detection of
